DSCI's Information Integration Division Wins U. S. Army Battle Command Research & Development Contract:

(Eatontown, NJ) November 9, 2006 – D&S Consultants, Inc. (DSCI) today announced that it was awarded an engineering, software, and experimentation research and development contract. The multiyear, multimillion dollar effort involves the exploration of advanced concepts, techniques, and processes for battle command and control of intelligent unmanned platforms.

“By awarding this contract, the U. S. Army will leverage DSCI’s unique integrated SMART™ process as well as our depth, expertise, and experience with all the synergistic technical disciplines necessary to successfully execute the mission. These disciplines include: systems engineering, sensors, communications, wireless networks, quality of service, phenomenology, information assurance, artificial intelligence, autonomous navigation, predictive filtering, fusion processing, software engineering, Live-Virtual-Constructive (LVC) simulation, and battle command.” said DSCI’s Chairman of the Board, President, and Chief Executive Officer, Steven A. De Chiaro.
